

**Chemistry Correlation Guide**  
**2016 Science Indiana Academic Standards to 2022 Performance Expectations\***

2016 Indiana Academic Standard	2022 Performance Expectation
<p><b>C.1.1</b> Differentiate between pure substances and mixtures based on physical and chemical properties.</p> <p><b>C.1.2</b> Use chemical properties, extensive, and intensive physical properties to identify substances.</p> <p><b>C.2.2</b> Determine the number of protons, neutrons, and electrons in isotopes and calculate the average atomic mass from isotopic abundance data.</p> <p><b>C.2.3</b> Write the full and noble gas electron configuration of an element, determine its valence electrons, and relate this to its position on the periodic table.</p> <p><b>C.2.4</b> Use the periodic table as a model to predict the relative properties of elements based on the pattern of valence electrons and periodic trends.</p>	<p><b>HS-PS1-1.</b> Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.</p>
<p><b>C.1.3</b> Recognize observable macroscopic indicators of chemical changes.</p> <p><b>C.1.4</b> Describe physical and chemical changes at the particle level.</p> <p><b>C.1.6</b> Demonstrate an understanding of the law of conservation of mass through the use of particle diagrams and mathematical models.</p>	<p><b>HS-PS1-2.</b> Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.</p>
<p><b>C.3.5</b> Use laboratory observations and data to compare and contrast ionic, covalent, network, metallic, polar, and non-polar substances with respect to constituent particles, strength of bonds, melting and boiling points, and conductivity; provide examples of each type.</p>	<p><b>HS-PS1-3.</b> Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.</p>
<p><b>C.6.3</b> Classify chemical reactions and phase changes as exothermic or endothermic based</p>	<p><b>HS-PS1-4.</b> Develop a model to illustrate that the release or absorption of energy from a</p>

<p>on enthalpy values. Use a graphical representation to illustrate the energy changes involved.</p>	<p>chemical reaction system depends upon the changes in total bond energy.</p>
	<p><b>HS-PS1-5.</b> Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.</p>
<p><b>C.4.5</b> Use a balanced chemical equation to calculate the quantities of reactants needed and products made in a chemical reaction that goes to completion.</p>	<p><b>HS-PS1-6.</b> Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.</p>
<p><b>C.4.3</b> Balance chemical equations and use the law of conservation.</p> <p><b>C.4.4</b> Apply the mole concept to determine the mass, moles, number of particles, or volume of a gas at STP, in any given sample, for an element or compound.</p> <p><b>C.4.5</b> Use a balanced chemical equation to calculate the quantities of reactants needed and products made in a chemical reaction that goes to completion.</p> <p><b>C.4.6</b> Perform calculations to determine the composition of a compound or mixture when given the necessary information.</p>	<p><b>HS-PS1-7.</b> Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.</p>
<p><b>C.2.5</b> Compare and contrast nuclear reactions with chemical reactions.</p> <p><b>C.2.6</b> Describe nuclear changes in matter, including fission, fusion, transmutations, and decays.</p> <p><b>C.2.7</b> Perform half-life calculations when given the appropriate information about the isotope.</p>	<p><b>HS-PS1-8.</b> Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.</p>
<p><b>C.7.1</b> Describe the composition and properties of solutions.</p> <p><b>C.7.2</b> Explain how temperature, pressure,</p>	<p><b>HS-PS1-9.</b> Use mathematical representations to describe the composition and properties of individual solutions and solutions involved in chemical reactions.</p>

2016 Indiana Academic Standard	2022 Performance Expectation
<p>and polarity of the solvent affect the solubility of a solute.</p> <p><b>C.7.3</b> Describe the concentration of solutes in a solution in terms of molarity. Perform calculations using molarity, mass, and volume. Prepare a sample of given molarity provided a known solute.</p> <p><b>C.8.1</b> Classify solutions as acids or bases and describe their characteristic properties.</p> <p><b>C.8.2</b> Compare and contrast the strength of acids and bases in solutions.</p> <p><b>C.8.3</b> Given the hydronium ion and/or the hydroxide ion concentration, calculate the pH and/or the pOH of a solution. Explain the meanings of these values.</p>	
<p><b>C.5.1</b> Use the kinetic molecular theory with the combined and ideal gas laws to explain changes in volume, pressure, moles, and temperature of a gas.</p> <p><b>C.5.1</b> Use the kinetic molecular theory with the combined and ideal gas laws to explain changes in volume, pressure, moles, and temperature of a gas.</p>	<p><b>HS-PS1-10.</b> Analyze data to support the claim that the combined gas law describes the relationships among volume, pressure and temperature for a sample of an ideal gas.</p>
	<p><b>HS-PS3-1.</b> Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.</p>
	<p><b>HS-PS3-2.</b> Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative positions of particles (objects).</p>
<p><b>C.6.1</b> Explain that atoms and molecules are in constant motion and that this motion increases as thermal energy increases.</p>	<p><b>HS-PS3-3.</b> Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a</p>

## Indiana Department of Education

2016 Indiana Academic Standard	2022 Performance Expectation
<p><b>C.6.2</b> Distinguish between the concepts of temperature and heat flow in macroscopic and microscopic terms.</p> <p><b>C.6.3</b> Classify chemical reactions and phase changes as exothermic or endothermic based on enthalpy values. Use a graphical representation to illustrate the energy changes involved.</p> <p><b>C.6.4</b> Perform calculations involving heat flow, temperature changes, and phase changes by using known values of specific heat, phase change constants, or both.</p>	<p>closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).</p>

\*Performance expectations are three dimensional. All three dimensions (Disciplinary Core Ideas, Science and Engineering Practices, and Crosscutting Concepts) must be included as part of effective instruction.
